Client websites

AnkerPak

Next.js site for packaging and logistics. Work includes service pages, forms, analytics, technical SEO, and accessibility fixes.

<https://ankerpak.com>

Images: public App Store previews and public website captures, October 6, 2026.

Luke's Film Lab

Astro photography site with an editable CMS, album collections, image optimization, and a film-metadata lightbox.

AI systems and client workflows

Orqstrate | Lead Developer

Lead developer on an AI orchestration platform with cloud execution, project workflows, tool integrations, and permission controls. Build across the application, agent runtime, and infrastructure.

Python, TypeScript, AWS, Terraform, Temporal, Anthropic

Engineering focus: Isolated execution, explicit permissions, worker readiness, bounded retries, and recoverable failures. Recent workflow and marketplace changes include staging verification; not all changes are public releases.

Talking Bibles | AI-Integrated Custom CMS

Develop an AI-integrated custom CMS for audio content, languages, agreements, and distribution. Build import validation, related data models, audio assets, and staff workflows.

Next.js, React, TypeScript, Convex, S3, AI SDK

Engineering focus: Related data models, import dry runs, background work queues, controlled audio downloads, and recording merge analysis. This is a private client application; this overview contains no client records or access details.

Enterprise engineering at FedEx

Five years across Java and Spring Boot systems, CI/CD, cloud modernization, production support, and repository migration. This experience informs how I release and support client products.
