

Ethan Hutchison

Software Engineer | AI Agents, Full-Stack & Mobile

Waco, TX | (417) 429-3356 | ethan@ethanh.co

ethanh.co | GitHub: scavengerisland | LinkedIn: ethanhutchison

Software engineer with five years of experience across enterprise systems, client applications, and independent products. Built and published two iOS apps, LymeTrack and FermentBuddy. Develop AI agents, web applications, and business integrations with hands-on AWS infrastructure and CI/CD experience.

Experience

Light Works Studio | Independent Software Consultant

2024 - Present | Remote

- Built and published LymeTrack and FermentBuddy in the App Store. Developed mobile interfaces, data models, reminders, and release workflows with React Native, Expo, and Convex.
- Build Orqstrate across the agent runtime, application, integrations, and AWS infrastructure. Recent work includes workflow readiness, workspace access, provider retries, and marketplace consent.
- Develop a Next.js and Convex CMS for Talking Bibles International, covering audio content, languages, agreements, imports, and distribution workflows.
- Built a Python email-to-Epicor ERP pipeline for DMP with validation, schema migrations, and human review for exceptions.
- Delivered client websites with Next.js and Astro, including editable content, forms, analytics, technical SEO, and accessibility fixes.

FedEx | Software Developer II, Cloud & DevOps

June 2021 - Present | Remote

Promoted from Intern to Developer I to Developer II.

- Led the organization's first Jenkins-to-GitHub Actions migration across about 15 applications. Standardized CI/CD and a build-once-promote release flow.
- Contributed to a \$500M mainframe-retirement initiative for FedEx Freight systems. Maintained 13 enterprise Java and Spring Boot applications.
- Handled configuration, security patching, access controls, production troubleshooting, and test coverage improvements.
- Built GitSync in PowerShell for safe, auditable repository migrations during the FedEx Freight separation.

Selected products and technical work

LymeTrack | App Store

Published iOS symptom and treatment journal. Built the mobile interface, check-ins, data model, trend views, reminders, and release workflows.

React Native, Expo, Convex, Clerk, Sentry

FermentBuddy | App Store

Published iOS fermentation companion with project tracking, timers, reminders, guided steps, and subscriptions. Built the product through App Store release.

React Native, Expo, Convex, EAS, Superwall

Orqestrate

AI agent platform with cloud execution, project workflows, tool integrations, and permission controls. Build across application and infrastructure. Active development includes staging verification.

Python, TypeScript, AWS, Terraform, Temporal, Anthropic

Talking Bibles CMS

Private client application for audio content, languages, agreements, and distribution. Develop import validation, related data models, audio assets, and staff workflows.

Next.js, React, Convex, S3, TypeScript

Context Hub

Built the PostgreSQL ledger, session capture, and MCP gateway around the external Hindsight memory engine. Added OAuth access for connected AI clients.

PostgreSQL, pgvector, MCP, OAuth 2.1

Technical skills

AI and integrations: Anthropic API, agent workflows, MCP, OAuth, REST APIs, PostgreSQL, pgvector

Web and backend: TypeScript, React, Next.js, Convex, Python, Java, Spring Boot

Mobile: React Native, Expo, EAS, Clerk, notifications, subscriptions

Cloud and delivery: AWS, Terraform, Docker, GitHub Actions, OIDC, Jenkins, IAM, KMS, Sentry, PostHog

Education

B.S., Computer Information Science | College of the Ozarks | 2022
